MEET THE SPEAKERS

DR MEENAKSHI S. KHER

TOPIC: A GAME CHANGER – THE USE OF SILVER DIAMINE FLUORIDE AND OTHER MINIMALLY INVASIVE TECHNIQUES IN INDIVIDUALS WITH SPECIAL HEALTH CARE NEEDS.

The understanding of dental caries has witnessed a paradigm shift in recent years, thus influencing preventive and management strategies significantly. Consequently, the management of dental caries in individuals with disabilities has seen revolutionary changes.

The contemporary evidence-based use of SDF in various clinical situations will be discussed in addition to minimally invasive restorative techniques including the use of gentle hand burs. These techniques greatly reduce the need for aggressive, stress inducing clinical procedures in these groups of individuals. Approaching the management of dental caries in this new way can transform the dental experience for both our patients with special health care needs and for ourselves.

DR MUKUL JAIN

TOPIC: SILVER DIAMINE FLUORIDE (SDF) : THE EFFECTIVE, EASY & ECONOMICAL TOOL IN PATIENTS WITH SPECIAL HEALTH CARE NEEDS

The biggest challenge in special care dentistry is managing the Child's behavior and fulfilling parent's expectations. To overcome such challenges we need faster techniques and life like restorations. Silver diamine fluoride is an inexpensive topical medicament used extensively to treat dental caries, with a long history of more than 80 years. No other interventional approaches for dental caries has the ease of application and efficacy as compared to SDF. It has many indications in both adult and paediatric dentistry. The silver acts as an antimicrobial, the fluoride promotes remineralization, and the ammonia stabilizes high concentrations in solution. For children with special health care needs, This technique provides the most reliable long term outcomes by allowing arrest of dental decay with the very first application. The lecture will cover in detail the application of SDF in special care dentistry.
